

-16- GROWING SARCO ORCHIDS

Sarco Lighting

Sarcochilus is an orchid which enjoys growing in dim environments with minimal light, 60-70% shading is ideal for their growth. Too much light can cause drying and burns.

Sarco Temperature

Sarcochilus can tolerate temperatures between 5-30 degrees celsius. Able to grow in a fairly wide range of temperatures it can be grown indoors or outdoors under shelter, though it may need to be brought in during the coldest parts of winter.

Sarco Humidity

Sarcochilus enjoys a high humidity in it's environment and can tolerate more moisture in the air than most other orchid species. Typically a humidity between 60-70% is preferred for a sarcochilus.

Sarco Watering

Sarcochilus enjoy plenty of water and can tolerate their growing media to be quite moist, watering 3 times a week in the morning is ideal, give them a thorough drenching to ensure that the media is dampened through.
